

Stainless Steel Air Curtains

Powerful isolation, efficient and energy saving

Air curtains form an "invisible air door" by using a high-speed fan to create a downward current of air. They are widely used across several industries including electrical, medical, food processing and chemical manufacturing. Olimpia Splendid air curtains effectively isolate convection, in order to maintain temperature and humidity.

* Olimpia Splendid air curtains feature a control sensor terminal which allows an external sensor to be connected so that the air curtain will start automatically when the door is open and shut off once the door is closed.

Dust-proof, insect prevention

Maintaining a high-speed air flow, they are effective in blocking dust from the outside and keeping the indoor environment clean.

Energy saving

Air conditioners and other climate control systems work more efficiently, reducing operating costs, due to the curtain of air created.

Odour reduction

Isolate smells from kitchens, outdoor gas, chemical laboratories, etc...keeping the environment fresh.

Adjustable Vane

Allows the direction of the airflow to be altered to best suit site conditions.
